ODFJELL

ODFJELL TERMINALS ROTTERDAM B.V.

Odfjell Terminals Rotterdam B.V. (OTR) is one of the largest independent third party tank storage terminals in Europe, aspiring to become the leader in its industry. OTR works 24/7 with chemicals and mineral oil products, with safety as the highest priority. Centrally located in the heart of the Port of Rotterdam, OTR is the perfect gateway to Europe.

Since 1957, Odfjell Terminals Rotterdam is working together with their employees and clients to reach goals. OTR is specialized in working with chemicals and mineral oil products like diesel fuels, plasticizers and acids, which are the basic ingredients for many goods that are indispensable in daily lives such as fuels, plastics, clothing and food.

Gateway to Europe

The advantageous geographical location meets all kinds of transportation demands: the North Sea and the main European inland waterways, highways and rail networks, are all nearby. Next to that, the site is linked to pipeline networks. All this provides OTR's customers an excellent commercial access for bulk movements to and from the European markets

Diverse handling facilities

The terminal has five berths for deep-sea tankers, with a maximum depth of 39.6 feet alongside. Additionally, there are many positions for short-sea tankers and barge activities and numerous platforms for handling of road tank trucks, iso-tank containers and rail tank cars. For the handling of high-volume products per rail tank car, OTR has a block train facility (Rail Cargo Center) for both clean petroleum products and bulk liquid chemicals.

OTR operates and complies with the most stringent legislation. The main objective is to ensure customer satisfaction whilst maintaining the safety, quality and environmental care demanded at each stage of any required operation.

TERMINAL FACILITIES AND CAPACITIES ODFJELL TERMINALS (ROTTERDAM)

Total storage capacity

• Number of tanks	281
• Mild steel	240
• Coated tanks	17
• Stainless steel	24
